

MediMobile™ delivers an instinctive mobile solution for physicians and other healthcare professionals who demand exceptional patient care, efficient front-end charge and information capture, and improved revenue management.

As healthcare professionals become more mobile, so does the need to deliver and access critical information remotely – anytime, anywhere. MediMobile™ enables you and your organization to address today's business and clinical imperatives.

Charge Capture – Real-time charge capture and synchronization at the point of care. Customizable CPT, ICD-9, and Modifier lists for each provider – including code sequencing, on-device bill confirmation and report/forms generation and printing from the handheld. MediMobile™ supports multiple user synchronizations (encrypted transmission) to a central data repository.

Rounds/Scheduling – Create, edit and manage patient rounds and schedules from MediMobile™ mobile device or Web.

eForms – MediMobile™ dynamic eForms allows users the freedom to create, change and complete forms from a mobile device or Web. In just seconds, an office administrator can initiate and send a pre-filled patient form (H&P, Progress Note, HCFA 1500, etc) to a physician's handheld. Upon completing the visit, the updated form is submitted from your device to the system and/or administrator in less than 8 seconds. This allows providers to dramatically reduce the time spent on traditional paper based processes while at the point of care.

Reporting – MediMobile™ realizes the value of converting data into knowledge and offers standard and custom data mining and information management tools.

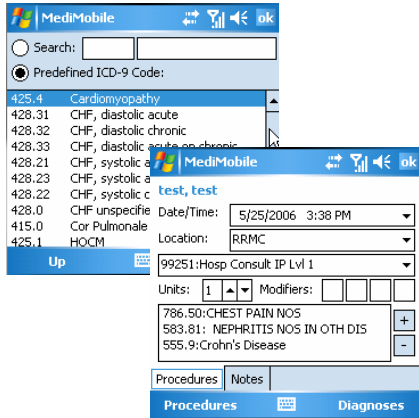

MediMobile™ Web

MediMobile™ Web provides physicians, staff and administrators with real-time, remote access to all patient information and charge transactions from any PC. This integrated solution means information flows between any PC and Mobile™ handheld, by multiple concurrent users.

MediMobile™ Web delivers the necessary component that promotes increased coordination of care among caregivers and healthcare professionals. MediMobile™ users can better manage patients, schedules, bills and provider activity without the complexities of many systems today.

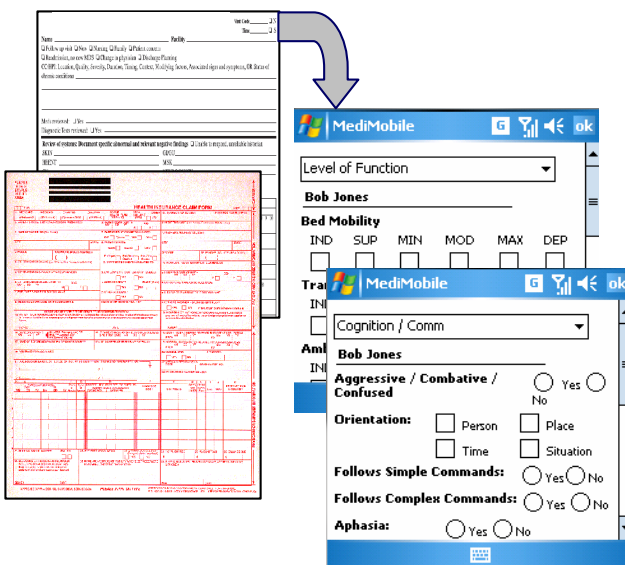

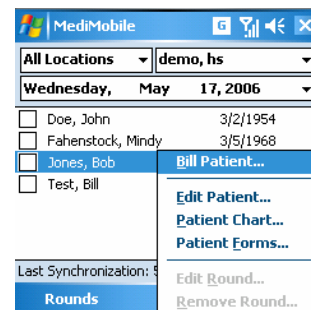

Charge Capture

- Customizable procedure and diagnoses lists
- Smart keys allow for quick CPT/ICD-9 code look-ups
- Color-coded displays to determine charge/bill status
- Previous diagnoses history and carry-over on new or subsequent visits
- Customizable user preferences

Patient Rounds/Scheduling

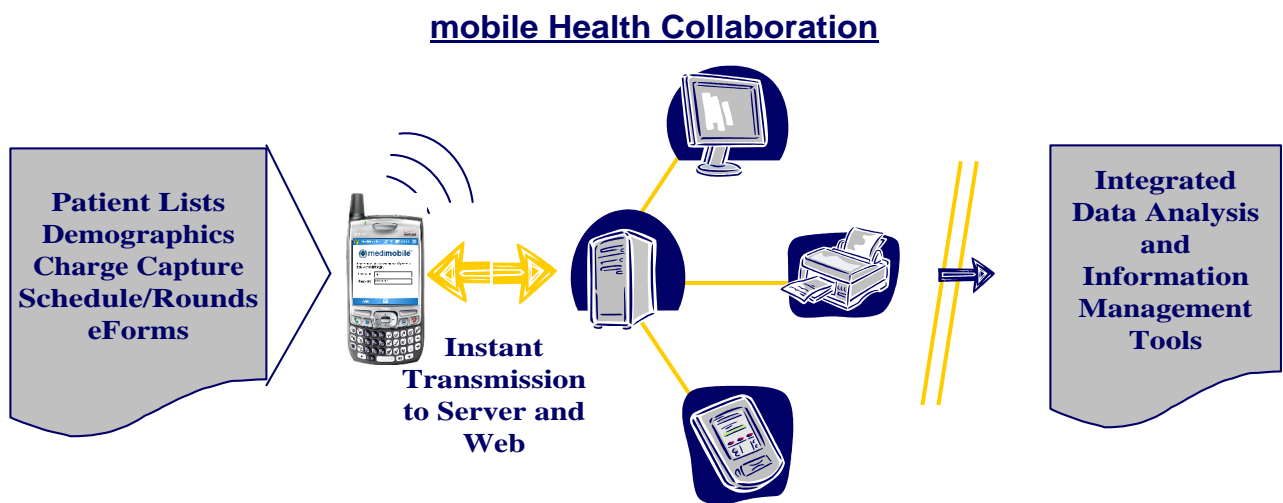

- Collaboration between multiple providers
- Initiate, change and complete patient rounds
- Change notification alerts between handheld and Web
- Filter patients by facility and/or providers
- Quick launch application

eForms

- “Dynamic” vs. static forms functionality
- Concurrent interaction and visibility by multiple users
- Print and Fax-on-demand capability to produce paper copies at the point of care
- Forms and information pre-fill capabilities
- Custom forms development for mobile devices
- Submit forms electronically from MediMobile™

MediMobile™ server synchronization technology allows any Microsoft Mobile 5.0 OS (Phone or PDA) and to synchronize charges, data and forms securely over cellular or wireless network including Bluetooth and cradle. The MediMobile™ platform has been architected to scale in user capacity – from a single user to large institutional organizations. MediMobile™ supports multiple concurrent connections, meaning multiple users will be able to synchronize data in real-time.

What does all this mean?

- Increase productivity and revenue
- Minimize lost charges and reduce claim denials and write-offs
 - Achieve same-day billing cycles (days-to-bill)
 - Real-time information access from anywhere
- Streamline your front-end information capture process
- Enhance care coordination and communication between multiple providers
 - Reduce administrative time spent on paper-based processes
 - Print patient lists, bills, reports and forms from MediMobile™
